Is Your AI-Built App Ready?

A 5-minute checklist. No code needed.

- [ ] **Login & permissions**
  Log in as one user. Can you see another user's data? (You shouldn't.)

- [ ] **Secrets**
  Are passwords and API keys stored privately, not in the app's visible code?

- [ ] **Input checking**
  Do forms reject empty, badly formatted, or oversized input?

- [ ] **Error handling**
  When something fails, does the user see a clear message?

- [ ] **Backups**
  Do you have a backup you've actually restored at least once?

- [ ] **Monitoring**
  Would you get an alert if the app went down?

- [ ] **Cost controls**
  Is there a daily cap on AI / API usage costs?

Scoring: Mostly checked? You're in good shape. Three or fewer? Get it looked at before you launch (or soon, if you already have).

Built something with AI and not sure it's ready? We'll take a look. Visit pmio.net to get in touch.
